

# Solar Energy Contracting

*Benefit from solar energy  
produced on your company's roof  
at a lower price than the market price.*

# What is Solar Energy Contracting?

With our Solar Energy Contracting solution, you benefit from renewable energy, produced directly on your roof, without any investment on your part, and with a very advantageous fixed energy tariff over 25 years.

## 100%

Renewable and local

Lower energy prices

CHF **0.-**  
Investment

## Greater autonomy

This solution has been designed as an alternative to conventional electricity distribution. The installation of photovoltaic panels on your site allows you to produce a part of the electricity that you consume locally, and thus offers you greater independence.

## Multiple advantages

Beyond the environmental logic, this alternative is also profitable, and allows you to save money. In fact, to encourage you to take this step, we take charge of the entire cost of supply, installation, and maintenance of the solar panels installed on your roof or your car park.

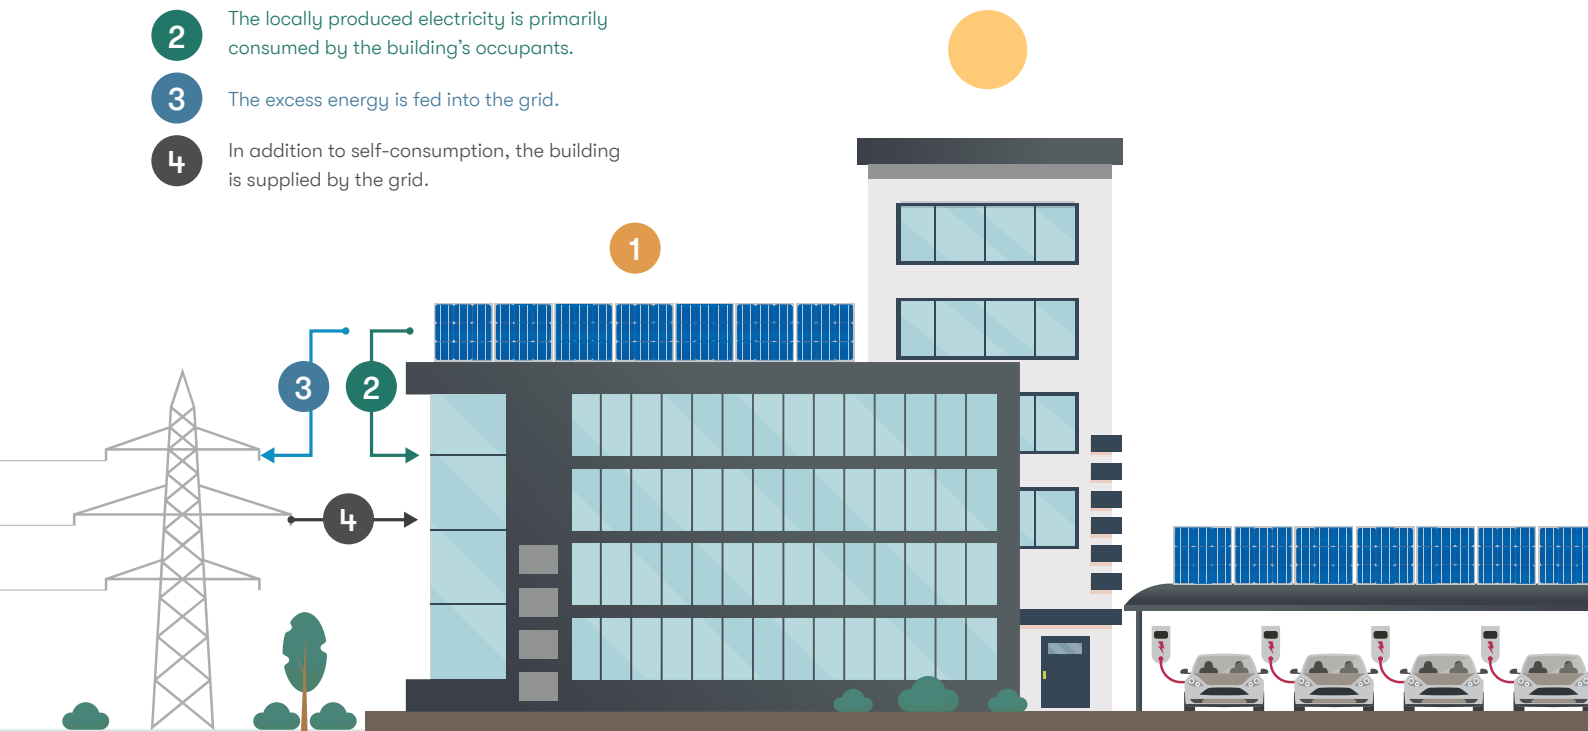

Offered in the form of a contracting agreement, this 25-year solution guarantees you a fixed and advantageous electricity price throughout the contract period (you can always leave the contracting agreement by buying back the installation).

## This solution is ideal if:

- You need a clear view of your energy costs over time.
- You do not wish to finance the installation of solar panels.
- You wish to act in favour of the development of renewable energies.
- You are constructing or renovating a building and need to consider the new laws.

## Use renewable energy produced directly on your roof

- 1 The building is equipped with photovoltaic modules.
- 2 The locally produced electricity is primarily consumed by the building's occupants.
- 3 The excess energy is fed into the grid.
- 4 In addition to self-consumption, the building is supplied by the grid.

If there are several consumers in the building, forming a community of self-consumers allows you to maximise the consumption of your own production. We can also provide you with information on this subject.

### When should Contracting Solar Energy be considered?

<b>What sites?</b>	Industries, shops, offices (consumption > 200 000 kWh/year)
<b>What area?</b>	> 500 m <sup>2</sup> on roofs or > 2,000 m <sup>2</sup> on carports or > 2,000 m <sup>2</sup> for a ground power plant
<b>What costs?</b>	CHF 0: everything is paid for by Romande Energie
<b>Who?</b>	Building owners, property developers, engineering firms

### Your options at the end of the contract

Once your contract has expired, you have several options:

1. You become the owner of the installation and benefit from the solar production for free.
2. You renew the contract for a period to be determined.
3. You instruct Romande Energie to renew the installation and your contract.

## The stages of your project

### 1 Meeting/study

We analyse your needs and advise you on the most suitable solutions.

### 2 Offer

We will make you an individual offer.

### 3 Realization

We manage the entire project: from administrative procedures to the commissioning of the installation.

### 4 Operation/maintenance

Romande Energie shall operate and maintain the system at its own expense for the entire contract period.

## 3 reasons to decide for Solar Energy Contracting

1. You pay less for your energy than on the market.
2. You get a fixed-price energy contract for 25 years.
3. You do not incur any costs for the installation of the solar panels, and benefit from this energy.
